OVERVIEW

Produce Agronomic Materials for field health. AeroBayShores.com is contracted to take images necessary to assist the determination of how best recommended treatment determinations by use of flight services. Data produced for the contracted will be delivered per instructions.

GOALS

1. Set date of flight (subject to weather conditions)
2. Set flight time
3. Determine which field to be imaged

SPECIFICATIONS

Flight data; purpose identification, Tile and Drainage, Germination counts, Crop Health, Crop Damage, Field Spray application, each have different flight requirements minimum to meet. Identification of purpose is the first subject to address. List of minimums are:

1. Tile and Drainage; flight requires moisture or ground cover variance that Thermal, NDVI sensors can identify location of tile and field drainage. Flight elevations may be adjusted for best response.
2. Germination; Flight elevation of 200 to 400 feet as needed. Seed between v1 - v3 exposed in good sunlight. Mapping may need greater overlap for highly accurate counts. Winds less than 20MPH.
3. Crop Health; Flight elevation of 200 to 400 feet as needed. Sunny or Bright Day. Winds less than 20MPH.
4. Crop Damage; Flight elevation of 300 to 400 feet as needed. Sunny or Bright Day. Winds less than 20MPH.
5. Field Spray requires little or no wind. Elevation of flight less than 3M. Mission can be flown with light fog but must allow for continuous sight. Flight speed varies according to prescription application by agronomist. Farm representative must be on sight. Chemicals will be loaded by farm representative according to any and all regulations for that product.

IDENTIFICATION

Flight location identified by sufficient information to properly identify field location. Use of as many means to identify is needed. Street corner and directions may not always be sufficient. Geo Tag reference is most accurate identification. Map placement is also acceptable. Also included to identify is field size and crop on the field.

Farm manager will provide for chemical sprayer drones the chemicals and delivery rates to the flight operator. Flight operator will not be possessing any chemical licenses. The farm manager will provide a licensed chemical sprayer licensed person as needed to comply with applicable laws governing the operation. Flight operator will be held harmless and protected by farm manager.

DISCLAIMER

Flight systems will include the drone(s) needed for the operation. Flights may operate at up to 400 ft AGL. all operations will require a licensed Remote Pilot In Charge (PIC). Flight service will need access to the fields being flown, access in and out of, along with any other persons needed for the flight. AIRCRAFT can FALL out of the sky. Persons not associated with the flight will be excluded from the flight area. Flight may be postponed or cancelled if people are within the flight area. Weather conditions also can postpone flight to a more acceptable day. Flight time preference is from 9AM to 4PM. AeroBayShores, its operators and employs, company and all associated are granted a waiver of liability form the contracted for any and all damage and injury. Contracted shall take all necessary precautions to mitigate risk as will Flight operations. Recovery of any equipment will not be hindered by the Contracted. Any post incident materials recovered will be delivered to Flight services.
